NOAA Central Library Video Lab

The NOAA Central Library Video Lab is available to all NOAA scientists for their business related media work, including digital video viewing, editing, converting, and duplicating. A request for access to the Video Lab should be communicated at the Library's Reference Desk.

The Reference Librarian will reserve the requested time and schedule an appointment with a media librarian for assistance. A media librarian will provide the NOAA user with basic directions on how to use the Video Lab and the equipment.

In the Video Lab, there are two Macintosh G5 computers, each with Final Cut Pro Studio 5, Microsoft Office 2007, and Internet access, via Safari and Mozilla browsers. The Library Video Lab equipment also includes: Sony GV-D1000 clamshell recorders, for MiniDV tapes; Sony GV-HD700 clamshell recorders to be used with the HD MiniDV tapes; Sony DVCAM recorder/reader for both DVCAM and MiniDV tapes; and Sony VHS recorder/player. The Epson color printer accepts print jobs from both computers.

All necessary manuals and tutorials are available in the Video Lab. Some blank media (DVDs, MiniDVDs) may be available, although the user is expected to replace them.

The NOAA Central Library Video Lab was developed in 2007 to support the OER/IPT Video Data Management System (VDMS) project.
